

# Libra recording solutions for ASTRO P25 Communications

Powerful, scalable interaction recording solutions built with Critical Communications deployments in mind.

When communications are mission critical and reliability is key, the ability to record these is more important than ever. Leverage the benefits of rapid response and incident reconstruction with the DataVoice voice logger.

The DataVoice Critical Communications solution is ideal for police, fire and emergency services, as well as public safety, railways, utility providers, defence services and other users of the powerful Motorola solutions. It facilitates the reliable recording, storage and management of Radio communications, as well as traditional telephony solutions to offer a truly cost effective, secure and scalable offering. The interface is built to be powerful and simple to use, to facilitate the search and playback of recordings, easily and quickly for when time is not on your side.

## Key features and benefits

### Seamless recording

Libra seamlessly connects and captures a variety of media types for Motorola Radio solutions.

### Fully redundant architecture

Support for a variety of redundancy & high availability options. VM deployments are also supported to reduce hardware footprint.

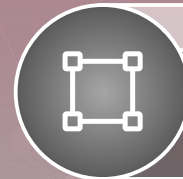

### Centralised management

Nexus provides a centralised monitoring, management, storage and review platform for large and/or geographically dispersed solutions.

### Multi-tenancy

Shared infrastructure solutions, now have a powerful and secure WebAdmin portal for each agency to quickly, and easily manage their own user access.

### Integrated solutions

Complementary solutions for screen recording, quality management and can be integrated with Computer Aided Dispatch (CAD) software.

### Secure

Securely manages the storage of recordings, including tamper-proofing; and access privileges per authorised user, with support for End-to-End Encryption.

### Efficient scalability

Efficient scalability allows for the systems to be scaled with ease, while limiting the high hardware footprint and overhead. A single Libra recorder can connect up to 4x AISs.

### Live Monitoring

Reviewers can in near real-time listen to conversations across multiple recorders all through a single interface, without the need for additional hardware.

### Cloud storage

Connects and stores directly to Azure and AWS cloud storage environments for truly scalable storage to cater for any retention period.

### Scenario recreation

NVisage is used for scenario recreation, providing playback of incidents in a sequential timeline for multiple interactions in a single view.
